 - Topical Vitamin Infusion
 - Acne Treatments

Customizable to fit your needs, large or small

Our high-quality custom labels can be created with your clinic's colors, logo and brand identity. No more "one-size-fits-all" approach to your retail skin care. Private labeling allows for a hands-on approach, giving you the ability to choose your products, quantities and marketing to fit the specific needs of your clients, practice and overall business philosophy.

Realize your clinic's retail potential!

Retail skin care sales provide an extraordinary profit potential for clinics and spas. Expand your marketing approach while increasing your level of customer service. Private label skin care products increase client retention and extend the life of your client base.

Low start-up cost

While most private label companies require substantial orders to provide this level of customization, Bionet Esthetics makes it available with low minimums. Your products arrive fully labeled and ready to place on the shelf. Start-up costs are available for as little as \$500 per item*. Further discounts are available when private labeling multiple products.

Value as you grow

As your sales grow, your value grows. Bionet Esthetics rewards successful private label skin care sales with volume discounts (ask a Bionet sales representative for more details).

In order to help launch and market your private label line, Bionet Esthetics offers first class support for our clients with customizable media kits, product samples, product training and technical support.*

* Additional restrictions and additional costs may apply.
